Personal projects

Filtrable TodoList

GitHub: <https://github.com/Barakyshka/FiltrableTodoList>

The user can add new tasks, mark their status (completed/uncompleted), see the creation date and delete tasks. There is a filter to display only uncompleted tasks and an option to sort by creation date (new first/old first) or alphabetically.

Technology List: React, React DOM, React Scripts, Loader Utils, TypeScript, Babel Runtime.

Redux

GitHub: <https://github.com/Barakyshka/Redux>

A multi-user note-taking application. Each user can create, delete and edit their notes using the Redux state manager.

Technology List: React, Vite, TailwindCSS, JSON Srever, React DOM, Zod, Redux, Redux Persist, React Redux, React Router DOM.

API & SPA

GitHub: <https://github.com/Barakyshka/API-SPA>

An SPA is a web app that dynamically updates the current page without full reloads, enhancing user interactions. Key features include efficient transitions, client-side rendering, compatibility with popular frameworks (AngularJS, React, Vue.js), no page refresh, and seamless API integration.

Technology List: React, React DOM, React Scripts, Loader Utils, Chance, TypeScript, Babel Runtime.
